

Changing PDF Settings in Internet Explorer

2018-08-28

You can change your Internet Explorer settings to ensure that PDF files open directly in *Adobe Acrobat* instead of the browser.

With your browser open, navigate to the top right of the tool bar.

1. Select the settings icon
2. Then, select “Manage add-ons”

Ensure you are in the “Toolbars and Extensions” tab, and then locate “Adobe PDF Reader” in the list of extensions on the right.

1. Click on “Adobe PDF Reader”
2. Select “Disable”

You may now exit the window and the settings will take effect.
