PDF Opening Settings in Chrome

2018-08-28

To ensure PDF's open quickly in your PDF viewer and NOT in your browser, you must first configure your browser settings.

First, copy and paste the following link into the Google Chrome address bar:

chrome://settings/content/pdfDocuments

- Or, you may also navigate to these settings by opening Chrome, then going to:
1. *Settings* < 2. *Advanced* < 3. *Content Settings* (under *Privacy and security*) < 4. *PDF Documents*

Now, make sure that the following setting is activated (blue) by clicking the switch button.
